

Flange Encapsulation

MetaLine® Series 700 – Peelable, translucent corrosion protective coatings

Long-term corrosion protection for all types of flange connections. The rubberlike skin only adheres to the pipe and may be cut open and retracted at any time in the flange area. Thus, the screw threads are accessible and free from disturbing paint. Once the inspection work has been completed, the custom-fit protective skin is pulled back and only the cutting edge is sealed again hermetically with MetaLine® Series 700.

Applications

- Lap joint flanges
- Block flanges
- Threaded flanges
- Blind flanges
- Pipe flanges

also
available in
transparent/
clear

Reference

- leaks are visually indicated by a balloon-like inflation of the coating
- in desert-like areas UV-repellent overcoating is recommended
- leakage probes and gas detectors can be integrated airtight in the gap space
